

Together
we give

LIQUID SOAP

Empower kids with the knowledge they are part of the solution! All those basics around hand-washing with soap, not touching your face, and social distancing, mean that everyone has an important role to play in stopping the spread of COVID-19.

We're thanking children around the world for focusing on good hygiene that helps protect themselves and their community.

INGREDIENTS for 350 Liters!

Ungarol (Sodium Laureth Sulphate)	17500 gm
Industrial salt	17500 gm
Ufacid (Linear Alkyl Benzene Sulphonic Acid)	8750 gm
Colour of choice	350 gm
Caustic	350 gm
Perfume	350 gm
Foam booster SPTP	350 gm

The kids at Miale are making liquid soap for their community. They are making 350 Liters! That's going to help wash a lot of hands!

**How would you reduce this formula to make a 1 Liter batch?
Post your answer on our Facebook page @KenyaWorksOrg!**

Making soap is chemistry! You probably won't have these ingredients at home, but you can find them online. You will also need rubber gloves and goggles.

Let the children in our rescue center in Kenya know we are all in this together by posting pictures of your soap on FB, Instagram or Twitter. Be sure to tag @KenyaWorksOrg so the kids are able to see your **#SuperPowerSoap!**
